

Interior Car Detailing

Standard detailing processes include:

- **Vacuuming** – The first step to cleaning the interior of a car includes vacuuming seats, headliners, rear cargo area, trunk and shelf. To get the best out of

vacuuming, floor mats and the vacuum should be cleaned separately. As for the difficult areas that cannot be reached using a vacuum, an air compressor can be used.

- **Brushing and Steam Cleaning** – This is used to clean carpets and mats. A thorough scrubbing is done on the mats in order to remove any stains and blemishes that may have accumulated over the past years. To be more effective, a steam-cleaner should be used. However, carpets should be left to dry completely to avoid mildew.
- **Glass Cleaning** – A glass cleaner is used to clean the glass. It ensures that the glass remains sparkling and ensures the driver's view is not obstructed.
- **Leather Trimming** – A leather cleaner, saddle soap and leather soap are used to clean all the leather parts. As for the soapy areas, a damp cloth is used to remove the excess soap. If the leather is dry, a conditioner customized for leather can be used to make cleaning more efficient.
- **Re-Vacuuming and Wiping** – Re-Vacuuming is important just after vacuuming. Any dirt left in the interior cabin is removed. Dashboards and windows should be wiped clean with a clean cloth using a cleaning detergent. After all this is done, a car's original shine is restored.
- **Perfuming** – Finally, to leave the car with a good scent, a deodorant is used in the car.

Exterior Car Detailing

Exterior car detailing is not just a quick wash of the exterior components of a car. A good car detailer will make the car gleam, minimize surface scratches, and should always apply a shielding paint sealant.

The common exterior process includes:

- **Washing and Drying** – Unlike a car wash, detailing is done by hand. The first step involves spraying the car with specialized spray that is high-powered, followed by thorough hand washing on the rims of the car, door jambs, glass and all exterior parts that need cleaning.
- **Claying** – A clay bar is used to remove any impurities, traces of overspray and other residue that cannot be removed with normal detergents.
- **Polishing** – After a car has been used for a while, it is normal that it loses its polish or shine. Therefore, in this process, the original polish is restored.
- **Sealing** – To give the car a glossy shine, a sealant is applied, and in some cases, wax or Ceramic coating can be used.

The above is a basic description of Automotive detailing which is the business we would be operating at 2 Oxbow Pond Road in Canterbury. The business would have one employee to start with little to no retail traffic as vehicles would be shuttled to the location from either of our current locations Truck Trends in Tilton or Bow NH. Parking would be required for one or 2 employee's at a time and any other vehicles would be inside having work performed. Signage would be on existing sign post already erected by Mckerley Properties.

Please let me know if this is what you are looking for or if there is anything else needed?

Thank you!
